PROFESSIONAL SUMMARY

Python Backend Developer with hands-on experience building backend systems. Focused on developing software with **clean structure, security, maintainability, and scalability**, while continuously learning and keeping my technical knowledge up to date.

I may not always have complete knowledge or an immediate answer to every problem, but when I encounter a knowledge gap or weakness, I **take responsibility, learn what is needed, and work to improve both myself and the final solution**. I consider **accountability, quality, and continuous growth** essential parts of being a professional software engineer.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework, FastAPI, Pydantic, REST API Design, API Versioning, Business Logic

Database: PostgreSQL, Django ORM, SQL, Database Design, Query Optimization, Indexing, Data Modeling, Data Normalization

Authentication & Security: JWT Authentication, Access/Refresh Tokens, Token Rotation & Blacklisting, RBAC, Role-Based Permissions, Session Management, Rate Limiting

Caching & Background Processing: Redis, Celery, Background Tasks, Caching

Testing & Performance: Pytest, Unit/Integration/API Testing, Authentication & Permission Testing, Locust, Load Testing, Performance Optimization

DevOps & Deployment: Docker, Docker Compose, Nginx, Gunicorn, GitHub Actions, Linux

Automation & API Tools: n8n, Swagger/OpenAPI, Postman, REST API Integration, External API Synchronization

Code Quality & Development: Git, GitHub, Black, Flake8, Code Review, Refactoring

PROFESSIONAL EXPERIENCE

Hootam – Backend Developer

Developed backend services for a Smart HR platform used by enterprise organizations.

- Designed and developed RESTful APIs with **Django REST Framework**, following a versioned architecture (`api/v1`) for maintainability and future scalability.
- Implemented **JWT authentication, RBAC, and role-based permissions**, defining and testing access boundaries for HR staff, managers, and other organizational roles.
- Used **Redis for caching** to reduce unnecessary database queries and improve API response performance.
- Implemented **Celery background tasks** for time-consuming operations such as email and notification processing, keeping API responses responsive.
- Developed core HR workflows including professional, ethical, and cultural assessments, satisfaction services, task assignment, and integration/synchronization with external HR services.
- Wrote automated tests covering **authentication, authorization, permissions, API behavior, and HTTP status codes**, ensuring reliable and predictable backend behavior.

Paksaaz Shimi – Backend Developer

Developed and maintained backend services for a product management platform handling diverse product data.

- Designed and maintained product data models for approximately **250 products** with variations in size, color, material, and category.

- Used **PostgreSQL indexing and optimized ORM queries** to improve data retrieval and support efficient bulk updates across product records.
- Implemented **product alias and synonym handling** to support different names referring to the same product or concept, improving data consistency and searchability.
- Refactored database and backend components as requirements evolved, maintaining flexibility as the development team and project scope expanded.
- Collaborated with the development team to implement frequent database and business-logic changes based on evolving client and management requirements.

Hooshbina – Lead Backend Developer

Led backend development for AI-powered education and real-estate platforms.

- Led the backend development team and designed core backend services for an **AI-powered online education platform**, supporting students, instructors, and support managers.
- Implemented **role-based permissions and workflows** for course and instructor selection, support ticketing, profile completion, and instructor role transitions.
- Developed and tested authorization rules and business logic to ensure each user role had appropriate access to platform resources and actions.
- Developed backend services for an **AI-powered real-estate web platform**, including property registration, management, and intelligent property analysis.
- Integrated AI-based image and map analysis to extract approximate property information such as **area, dimensions, and map characteristics** from owner-submitted images.
- Implemented backend support for **Persian voice-based property search**, allowing users to search real-estate listings using natural spoken queries.

Memari Salaar – Technical Consultant & API/Database Team Lead

Developed backend, database, automation, and intelligent search solutions for a B2B construction and industrial products platform.

- Developed **n8n automation workflows** and messaging bots across **Bale and Rubika**, enabling automated product search and communication between the business and its customers.
- Designed and maintained a **PostgreSQL product database** containing 10,000+ products with inconsistent naming, multiple brands, languages, commercial terminology, and varied measurement formats.
- Improved product search and data consistency through **database indexing, unique constraints, data normalization, and standardized product attributes** such as size, brand, category, and title.
- Designed a **JSON-based product metadata structure** to extract and normalize key attributes from product data, enabling more accurate and structured search.
- Implemented search preprocessing to normalize user queries and extract product characteristics such as **size and product terminology**, including conversion between commercial, metric, and inch-based measurements.
- Built automated product price processing workflows that identified new products for insertion and updated existing products and their indexed data while preserving product records.
- Developed data structures and reporting workflows for monitoring **user activity and business KPIs**, supporting operational analysis and decision-making.

LANGUAGES

- **Persian:** Native
- **English:** Advanced reading/writing, Intermediate listening, Basic speaking (actively improving)

SOFT SKILLS

Problem Solving · Technical Leadership · Clean Code Advocate · Collaborative Debugging · Continuous Learner
